WIBBY: the technology at day life service

We work to improve the patient conditions and those who care for them: this is why we created Wibby, an innovative and transportable washing system, very easy to use and designed with a single objective: the well-being of the person.

Fully automatic, practical, hygienic and fast, Wibby guarantees maximum comfort and simplifies healthcare operations, restoring a new level of comfort to those who are bedridden.

For the first time, thanks to Wibby, you can wash a patient or a loved one directly in their bed, without any effort and without any additional technical support.

**All you need is a water source and an electrical outlet:
Wibby will do the rest in a few minutes.**

Why Wibby?

- Comfortable and easy to use even at home
- Does not require any additional technology or accessories
- Used directly on patient's bed
- Thanks to the waterproof sheet supplied, there is no need to change the bed sheets
- Complete and hygienic washing system

How can you transport Wibby?

Thanks to the wheels it can be transformed into a common trolley, a bike trolley, or even as a backpack. The small dimensions (25 x 37 x 65 cm) are designed for the capacity of any luggage van.
